

Follow the instructions below to set up the recommended equipment for use with Quick Ceph Systems.

Macintosh Computers

Macintosh Ports

PowerMac G5

iMac

MacBook Pro

MacBook

Mac mini

USB Port

Used to connect peripheral devices, as shown below. You should connect the keyboard to one USB slot on the computer and the USB hub to another.

FireWire Port

Used to connect high speed peripherals, such as scanners, hard drives, and CD-RW drives.

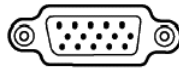

Internal Modem Port

Used to dial-up to the Internet. Connects using a standard telephone cord.

Ethernet Port

Used for networking with other computers. Connects using Category 5 cables with an RJ-45 plug. Information on setting up a network can be found on the Downloadable Files page of our web site at www.quickceph.com

Video-Out Port

Used to connect an external monitor. Newer systems have DVI. VGA monitors can be used with the correct adapter.

7-Port USB Hub

Used to connect all external devices, as shown.

Color Photo Printer
(Some printers have a built-in card reader.)

USB Scanner with Transparency Adapter
(FireWire scanners connect to FW ports)

USB Card Reader
(Not necessary if you plug your digital camera directly to the hub or if your printer has a built-in card reader.)
(FireWire card readers connect to FW ports)

Quick Ceph Eve Key
Required for use with Quick Ceph software
